

BUILT ON EXPERIENCE DESIGNED FOR ACTION

PBI Max™ LP is the result of years of textile development for advanced protective gear. Every fiber, every thread is chosen to perform where conditions demand full focus and full function.

INHERENT PROTECTION UNDER HEAT STRESS

Even when exposed to flashover or direct flame, the fabric resists thermal degradation. The fiber blend remains intact, reducing the risk of fabric failure during critical operations.

STAYS READY UNDER PRESSURE

Exposure to heat, UV radiation, and daily mechanical stress does not alter its performance. The material retains its shape, feel, and function—operation after operation.

BUILT FOR THE GEAR THAT GETS USED

Protective clothing made with PBI Max LP is worn by professionals who rely on gear that holds up under pressure—and keeps going.
